JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 121, Numbers 1–2, 1 September 2000

Contents

Preface ix

G.A. Watson
Approximation in normed linear spaces 1

Y. Nievergelt
A tutorial history of least squares with applications to astronomy and geodesy 37

D. Leviatan
Shape-preserving approximation by polynomials 73

A. Ronveaux, A. Zarzo, I. Area and E. Godoy
Classical orthogonal polynomials: dependence of parameters 95

R. Piessens
Computing integral transforms and solving integral equations using Chebyshev polynomial approximations 113

G. Nürnberger and F. Zeilfelder
Developments in bivariate spline interpolation 125

R.-H. Wang
Multivariate spline and algebraic geometry 153

R. Schaback
A unified theory of radial basis functions. Native Hilbert spaces for radial basis functions II 165

C. Taswell
Constraint-selected and search-optimized families of Daubechies wavelet filters computable by spectral factorization 179

P. Guillaume and A. Huard
Multivariate Padé approximation 197

N.M. Temme
Numerical and asymptotic aspects of parabolic cylinder functions 221

J.M. Borwein, D.M. Bradley and R.E. Crandall
Computational strategies for the Riemann zeta function 247

S. Lewanowicz
Recursion formulae for basic hypergeometric functions 297

W.N. Everitt, L.L. Littlejohn and R. Wellman
The left-definite spectral theory for the classical Hermite differential equation 313

B. De Schutter
Minimal state-space realization in linear system theory: an overview 331

A. Bultheel and B. De Moor
Rational approximation in linear systems and control 355

F. Stenger
Summary of Sinc numerical methods 379

G. Alefeld and G. Mayer
Interval analysis: theory and applications 421
